Analytical quality control

NANOCONTROL NANOCHECK

Method:

Test solutions for the determination of photometric accuracy (Secondary standards for the control of inspection, measuring and test equipment in accordance to ISO 9001 and ISO 14001)

Range: 0,300 – 2,000 E

Shelf life: 12 months

Cat. No.: 925 701

Price: € 98,00 (valid until 04/2006)

|-----------------------|---------------------------------------|--------------------------------|
| <u>Content</u> | 2 tubes with test solution 1 | 1 tube with blank value „NULL“ |
| | 2 tubes with test solution 2 | 1 instruction leaflet (D, GB) |
| | 1 lot specific interpretation leaflet | |

Benefits

- NANOCONTROL NANOCHECK is a secondary standard for the control of inspection, measuring and test equipment in accordance to ISO 9001 and ISO 14001. The test solutions have been checked in a reference photometer monitored with primary standards (NIST-Standards). The results are documented.
- With only 2 stable colour solutions the wavelength accuracy and the linearity of the absorbance measurement can be checked.
- NANOCONTROL NANOCHECK fulfils the requirements of analytical quality control mentioned in the ATV-advisory leaflet A 704 (Operational Methods for the Self-Monitoring of Wastewater Systems).

Application

Suitable for NANOCOLOR® photometer und photometer PF-10 and PF-11.

For the inspection of the following filter respectively wavelength adjustments:
 365, 385, 436, 470, 520, 540, 585 und 620 nm.

Key customers

- All users of NANOCOLOR® photometer and photometer PF-10 and PF-11
- Municipal waste water plants • Industrial waste water plants • Chemical industry

For further information, please observe the **instruction leaflet**.

A material safety data sheet (MSDS) is available on the internet (www.mn-net.com) or on request at MACHEREY-NAGEL.
